## Key:

cold air button:

Represented by a snowflake icon on the button, thereby conveying cold air. Helps user utilize cold air with a click of a button instead of having to use the switches.

Heat selector switch:

Represented by the numbered 1-3 switch.  
The higher the number, the hotter the air that is blown. User can actively press the ends of switch to adjust temperature.

Air selector switch:

Similar to heat selector switch but instead allows for the adjustment of air power. Higher the number, the stronger the wind.

Power on button:

Allows user to allow the electric current to pass from the outlet to the hair dryer.

Power off button:

Allows user to block the electric current from the outlet to the hair dryer.

Plug:

Universal design of electric plug.

For passing in power.
